

ODIN™

Advanced Nuclear Physics for Safer, More Powerful Security Screening

Dosing

Ultra Low X-ray Doses - 0.25uSv/scan:

- + Less than dose received in 4 minutes of flying time at 30,000 feet from cosmic sources
- + Under ANSI N43.17 limits for pregnant women
- + One dose/scan, in contrast with backscatter instruments which require 2-4 doses/scan

Rollout - 2010

- o Select private firms only

Placements - 2009-2011

- o Airports
- o Cruise ship terminals
- o Government Office buildings/embassies
- o Military checkpoints

Image and Throughput

- Full height (head to toe), through body image,
 - o Penetrates multiple layers of clothing, shoe heels, prosthetics etc.
- Extraordinary resolution, for detection of the smallest ingested or hidden items.
- Short Inspection time (5 sec)
- Highly automated
- Digital record keeping for later legal reference.
- Upgradeable for determination of molecular composition
